

Automated Air Flow System and Method

ABSTRACT OF THE DISCLOSURE

[0049] The disclosed embodiments provide and automated air flow system and method. An automated register is coupled to at least one sensor for providing data associated with a structure. The automated register is configured to automatically provide air flow into the structure in response to the sensor data. A base station in communication with the automated register is adapted to be coupled to an air flow source. The base station receives status data from the automated register and is configured to control the air flow source based on the status data.
